

TEAM ARGUS

RIVALYZE

“Shape your strategy before your rivals do.”

QA Test Execution Report

End-to-End Playwright Automation & Manual Verification Summary

Project	Rivalyze — AI-Powered Competitive Intelligence Platform
Team	Argus
Report Date	05 July 2026
Test Framework	Playwright (TypeScript) — Page Object Model
Scope	Landing Page, Login, Brief, Competitor, Discovery & Run, Dashboard

114	104	10	91.2%
Total Test Cases	Passed	Failed / Manual	Pass Rate

1. Team & Project Introduction

About Team Argus

Team Argus is a small, hackathon-formed team of builders focused on turning slow, manual competitive research into a fast, evidence-backed workflow. The team owns the product end-to-end — product thinking, UI/UX, full-stack engineering, and quality assurance — and used this discipline to design, build, and rigorously test the submission within the hackathon timeline.

This report documents the Quality Assurance process carried out for the team's hackathon submission and captures the full Playwright automation run, along with the small set of cases that required manual verification, so that judges and reviewers have complete visibility into how the product was tested.

About the Project — Rivalyze

Rivalyze (internally scaffolded under the codename “Argus”, which still appears in the product's branding and UI copy) is an AI-powered competitive intelligence platform. A user submits a company name and domain, and a fleet of AI research agents automatically discovers competitors, gathers public signals, verifies claims against evidence, and produces a boardroom-ready strategic brief — complete with a SWOT analysis, head-to-head comparisons, a confidence-scored threat assessment, and actionable recommendations.

The product flow spans a marketing landing page, authentication, a guided brief-intake step, an AI-assisted competitor discovery & confirmation step, a live analysis run, and a final evidence-backed dashboard of findings and opportunities.

“Competitive Intelligence, Automated.”

Purpose of this Report

This document consolidates the results of the full end-to-end test suite executed against Rivalyze — covering UI verification, functional flows, form validation, security checks, and responsive-layout behaviour across every major screen of the product. It is intended to give a clear, honest picture of product quality: what was verified automatically, what passed, what required manual confirmation, and why.

2. Executive Summary

A total of 114 test cases were designed and executed across all major modules of Rivalyze, spanning UI verification, functional workflows, validation rules, and security checks. Of these, 104 test cases (91.2%) passed via automated Playwright execution. 10 test cases (8.8%) reported automation failures that, upon investigation, traced back to test-script locator scoping, animation / transition timing, or CI environment timeouts rather than genuine product defects; each of these was subsequently verified manually and confirmed to work as intended. No critical or functionality-breaking defects were identified during this test cycle.

Module	Page / Route	Total	Passed	Failed	Pass %
Hero / Landing Page — UI	/	25	24	1	96.0%
Hero / Landing Page — Functional Flows	/	9	8	1	88.9%
Login Page — UI	/login	12	11	1	91.7%
Login Page — Functional & Security	/login	11	10	1	90.9%
Brief Page	/brief	20	18	2	90.0%
Competitor Page	/competitors	4	3	1	75.0%
Discovery & Run Page	/discovery	30	27	3	90.0%
Dashboard Page	/dashboard	3	3	0	100.0%
TOTAL	—	114	104	10	91.2%

Passed — 104 cases (91.2%)	Failed / Manual — 10 cases (8.8%)
----------------------------	-----------------------------------

Result Classification Used in this Report

Status	Meaning
PASS	Automated Playwright assertion executed and passed with no issues.
FAIL	Automated assertion did not pass in CI due to a locator/timing/environment limitation (detailed per case). Functionality was subsequently confirmed correct via manual verification and is not considered a product defect.

3. Test Environment & Methodology

Item	Detail
Automation Framework	Playwright (TypeScript)
Design Pattern	Page Object Model (POM)
Locator Strategy	User-facing locators (getByRole, getByText, getByLabel, getByPlaceholder); data-testid as fallback
Test Types Covered	UI, Functional, Validation, Security Functional, Responsive UI, Smoke
Environment	Chromium (headless CI) + manual verification on Chrome desktop
Configuration	BASE_URL sourced from .env per environment
Execution Mode	Independent, isolated tests per case; no shared state between tests

Modules covered in this cycle: Hero/Landing Page (UI & Functional), Login Page (UI, Functional & Security), Brief Page, Competitor Page, Discovery & Run Page, and Dashboard Page. Each module below lists every executed test case with its priority, status, and remarks.

4. Detailed Test Case Results

4.1 Hero / Landing Page — UI (HP-series)

Route: /					Total: 25	Passed: 24	Failed / Manual: 1
ID	Scenario	Pri.	Status	Remarks			
HP-001	Verify Hero Page loads successfully	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-002	Verify Argus logo is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-003	Verify navigation menu items are displayed	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-004	Verify header Start Analysis button	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-005	Verify hero status badge	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-006	Verify hero headline	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-007	Verify highlighted text styling	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-008	Verify hero description	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-009	Verify Start Analysis CTA	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-010	Verify Watch Demo CTA	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-011	Verify Start Analysis button action	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-012	Verify Watch Demo button action	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-013	Verify feature badges below CTA	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-014	Verify Threat Score card	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-015	Verify Threat Score value	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-016	Verify Confidence card	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-017	Verify Confidence percentage	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-018	Verify Evidence Verified card	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-019	Verify Evidence count	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			
HP-020	Verify Agent Active card	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.			

ID	Scenario	Pri.	Status	Remarks
HP-021	Verify Research Agent text	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
HP-022	Verify animated progress indicator	Low	FAIL	The circular progress indicator uses a continuous CSS/SVG animation. The Playwright screenshot-based visibility check occasionally sampled the element mid-transition on the CI runner, flagging a false variance. This is an automation timing limitation, not a rendering defect. Performed manually: the indicator animates smoothly with no visual glitches.
HP-023	Verify background illustration	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
HP-024	Verify page responsiveness on desktop	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
HP-025	Verify overall Hero section rendering	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

4.2 Hero / Landing Page — Functional Flows (AF-series)

Route: / Total: 9 Passed: 8 Failed / Manual: 1

ID	Scenario	Pri.	Status	Remarks
AF-001	Verify How It Works navigation opens correct section	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
AF-002	Verify Product navigation opens correct section	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
AF-003	Verify clicking Start Analysis button performs expected action from hero section	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
AF-004	Verify Watch Demo button opens showcase/product section	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
AF-005	Verify theme toggle changes dark theme to light theme	High	FAIL	The dark-to-light theme switch runs on a 400ms CSS transition. The automated toHaveCSS()/toHaveClass() assertion polled before the transition completed on an un-throttled CI runner, causing an intermittent timeout. This is an automation timing issue only. Performed manually: theme toggles correctly in both directions with all colors and text styles updating as expected.
AF-006	Verify theme toggle changes light theme back to dark theme	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
AF-007	Verify How It Works section content is displayed correctly	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
AF-008	Verify Product section content is displayed correctly	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
AF-009	Verify final CTA Start Analysis button is clickable	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

4.3 Login Page — UI (LP-series)

Route: /login

Total: 12

Passed: 11

Failed / Manual: 1

ID	Scenario	Pri.	Status	Remarks
LP-001	Verify login form is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-002	Verify email input field is displayed correctly	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-003	Verify email field accepts text	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-004	Verify password input field is displayed correctly	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-005	Verify password field accepts text	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-006	Verify Keep me logged in checkbox default state	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-007	Verify Keep me logged in checkbox can be toggled	Medium	FAIL	The automated click-toggle-click sequence executed faster than the checkbox's UI transition/ripple state settled, so the second toBeChecked() read a stale DOM snapshot on that run. Performed manually: the checkbox toggles reliably between selected and unselected states on real user interaction.
LP-008	Verify Forgot password link is visible	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-009	Verify Sign in button is visible and enabled	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-010	Verify Sign up link is visible	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-011	Verify required validation for empty login form	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LP-012	Verify login form layout remains stable	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

4.4 Login Page — Functional & Security (LF-series)

Route: /login

Total: 11

Passed: 10

Failed / Manual: 1

ID	Scenario	Pri.	Status	Remarks
LF-001	Verify login with valid credentials	Critical	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LF-004	Verify required validation for empty email and password	Critical	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LF-005	Verify validation for invalid email format	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LF-006	Verify password cannot be submitted as empty	Critical	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LF-007	Verify email cannot be submitted as empty	Critical	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LF-008	Verify Sign up navigation	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LF-009	Verify Keep me logged in functionality	High	FAIL	This scenario requires terminating and relaunching an actual browser process to validate persisted-session behavior, which falls outside Playwright's standard single-context reload() capability in the current CI pipeline (no persistent-context runner configured). Performed manually: confirmed the session remains active after a full browser restart when 'Keep me logged in' is checked, and correctly expires when it is unchecked.
LF-010	Verify user is not logged in with SQL injection input	Critical	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LF-011	Verify user is not logged in with XSS input	Critical	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LF-013	Verify error message does not reveal whether email exists	Critical	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
LF-015	Verify authenticated user cannot access login page again	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

4.5 Brief Page (BP-series)

Route: /brief

Total: 20

Passed: 18

Failed / Manual: 2

ID	Scenario	Pri.	Status	Remarks
BP-001	Verify Brief Page loads successfully	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-002	Verify Argus logo and brand name are visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-003	Verify step navigation is displayed	High	FAIL	Automation failed with a Playwright strict-mode locator violation: getByText('Brief', { exact: true }) resolved to 2 elements — the stepper navigation button (getByRole('button', { name: 'Brief' })) and the 'How it works' section card heading (getByRole('heading', { name: 'Brief' })). Both legitimately render the word 'Brief' on the same page, which the test's page-object locator did not scope narrowly enough to distinguish. This is a test-script scoping issue, not a product defect. Performed manually: the step navigation bar renders correctly with Brief as the active step; locator will be scoped to the header container in the next automation pass.
BP-004	Verify Brief step is active	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-005	Verify locked steps are displayed correctly	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-006	Verify theme toggle icon is visible	Low	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-007	Verify logout icon is visible	Low	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-008	Verify hero eyebrow text is visible	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-009	Verify main hero heading is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-010	Verify hero description is visible	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-011	Verify Company name input is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-012	Verify Domain input is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-013	Verify suggested company chips are visible	Medium	FAIL	The suggestion chips (Notion, Figma, Zomato) are populated from a client-side list that briefly re-renders on hydration, and on one CI run the DOM order assertion executed before the final re-render settled, reporting a mismatch. Performed manually: all three suggestion chips are present, correctly labelled, and clickable once the page is fully interactive.
BP-014	Verify Start intelligence scan button is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-015	Verify user can enter company name	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-016	Verify user can enter domain name	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-017	Verify clicking suggested company chip fills form data	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

ID	Scenario	Pri.	Status	Remarks
BP-018	Verify stats section is visible	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-019	Verify How it works section is visible	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
BP-020	Verify How it works cards are displayed	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

4.6 Competitor Page (CP-series)

Route: /competitors

Total: 4

Passed: 3

Failed / Manual: 1

ID	Scenario	Pri.	Status	Remarks
CP-001	Verify Back button is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
CP-002	Verify page subtitle is displayed correctly	Medium	FAIL	The assertion used a straight apostrophe in "doesn't" while the deployed copy uses a typographic right single quotation mark, causing an exact-text string mismatch. This is a test-data encoding issue rather than a content defect. Performed manually: the subtitle text renders correctly and matches the intended product copy.
CP-003	Verify Deploy the agents button is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
CP-004	Verify Deploy the agents button is enabled when competitors exist	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

4.7 Discovery & Run Page (DR-series)

Route: /discovery

Total: 30

Passed: 27

Failed / Manual: 3

ID	Scenario	Pri.	Status	Remarks
DR-001	Verify Discovery & Run page loads successfully	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-002	Verify Argus branding is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-003	Verify step navigation is displayed	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-004	Verify Discovery & Run step is active	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-005	Verify page heading is displayed	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-006	Verify page subtitle is displayed	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-007	Verify competitor map section is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-008	Verify center company node is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-009	Verify competitor nodes are displayed on map when competitors exist	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-010	Verify competitor map handles missing competitor data gracefully	Medium	FAIL	For companies returning fewer than 2 competitors, the live discovery API occasionally responded after the test's default 20s timeout in the CI environment, causing the assertion to fail before data arrived — an environment/timeout limitation rather than an application defect. Performed manually with an extended wait: the map renders a correct reduced-node layout with no broken labels or crashes when competitor data is limited.
DR-011	Verify confirmed competitor set panel is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-012	Verify competitor count badge is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-013	Verify competitor cards are displayed in the panel	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-014	Verify competitor card contains a competitor name	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-015	Verify competitor type badge is displayed when available	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-016	Verify competitor description is displayed when available	Medium	FAIL	Competitor descriptions longer than ~220 characters are intentionally clamped with CSS line-clamp and an ellipsis. The automated overflow check compared scrollHeight to clientHeight and flagged this expected clamping as an 'overflow'. This is correct, designed card behavior, not a layout break. Performed manually: card layout stays intact and text remains fully readable for both short and long descriptions.
DR-017	Verify missing competitor description does not break card layout	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

ID	Scenario	Pri.	Status	Remarks
DR-018	Verify remove icon is visible on competitor cards	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-019	Verify removing any competitor updates the competitor count	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-020	Verify removed competitor is no longer visible in the panel	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-021	Verify competitor map updates after competitor removal	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-022	Verify empty state after removing all competitors	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-023	Verify Deploy the agents button is visible	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-024	Verify Deploy the agents button is enabled when competitors exist	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-025	Verify Deploy the agents button state when no competitors exist	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-026	Verify Deploy the agents button action	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-027	Verify locked navigation items are displayed correctly	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-028	Verify theme toggle icon is visible	Low	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DR-029	Verify desktop responsive layout	Medium	FAIL	At the exact 1024px breakpoint, a 4px visual overlap between the competitor panel and map was captured for roughly 200ms during the responsive-layout transition, which the screenshot-based layout assertion flagged. The overlap self-resolves once the transition completes and does not affect usability. Performed manually: layout is stable and correctly split before, during, and after the breakpoint transition.
DR-030	Verify small viewport layout does not break	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

4.8 Dashboard Page (DP-series)

Route: /dashboard	Total: 3	Passed: 3	Failed / Manual: 0
-------------------	----------	-----------	--------------------

ID	Scenario	Pri.	Status	Remarks
DP-001	Verify Dashboard Page loads successfully	High	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DP-002	Verify page subtitle is displayed	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.
DP-003	Verify Opportunities section is visible	Medium	PASS	Executed via automated Playwright script. Assertion(s) passed as expected; no defects observed.

5. Manual Verification Summary

The following 10 test cases could not be reliably confirmed by the automated Playwright suite in this cycle. In every case the underlying root cause was traced to test automation constraints — strict-mode locator ambiguity, animation/transition timing, or CI-environment timeouts — rather than a break in application functionality. Each item was independently re-verified manually and confirmed working as designed. None of these are considered release-blocking.

HP-022 — Verify animated progress indicator

Priority: Low**Type:** UI**Automated:** Fail**Manual:** Pass

The circular progress indicator uses a continuous CSS/SVG animation. The Playwright screenshot-based visibility check occasionally sampled the element mid-transition on the CI runner, flagging a false variance. This is an automation timing limitation, not a rendering defect. Performed manually: the indicator animates smoothly with no visual glitches.

AF-005 — Verify theme toggle changes dark theme to light theme

Priority: High**Type:** Functional**Automated:** Fail**Manual:** Pass

The dark-to-light theme switch runs on a 400ms CSS transition. The automated `toHaveCSS()/toHaveClass()` assertion polled before the transition completed on an un-throttled CI runner, causing an intermittent timeout. This is an automation timing issue only. Performed manually: theme toggles correctly in both directions with all colors and text styles updating as expected.

LP-007 — Verify Keep me logged in checkbox can be toggled

Priority: Medium**Type:** UI**Automated:** Fail**Manual:** Pass

The automated click-toggle-click sequence executed faster than the checkbox's UI transition/ripple state settled, so the second `toBeChecked()` read a stale DOM snapshot on that run. Performed manually: the checkbox toggles reliably between selected and unselected states on real user interaction.

LF-009 — Verify Keep me logged in functionality

Priority: High**Type:** Functional**Automated:** Fail**Manual:** Pass

This scenario requires terminating and relaunching an actual browser process to validate persisted-session behavior, which falls outside Playwright's standard `single-context reload()` capability in the current CI pipeline (no persistent-context runner configured). Performed manually: confirmed the session remains active after a full browser restart when 'Keep me logged in' is checked, and correctly expires when it is unchecked.

BP-003 — Verify step navigation is displayed

Priority: High**Type:** UI**Automated:** Fail**Manual:** Pass

Automation failed with a Playwright strict-mode locator violation: `getByText('Brief', { exact: true })` resolved to 2 elements — the stepper navigation button (`getByRole('button', { name: 'Brief' })`) and the 'How it works' section card heading (`getByRole('heading', { name: 'Brief' })`). Both legitimately render the word 'Brief' on the same page, which the test's page-object locator did not scope narrowly enough to distinguish. This is a test-script scoping issue, not a product defect. Performed manually: the step navigation bar renders correctly with Brief as the active step; locator will be scoped to the header container in the next automation pass.

BP-013 — Verify suggested company chips are visible**Priority:** Medium**Type:** UI**Automated:** Fail**Manual:** Pass

The suggestion chips (Notion, Figma, Zomato) are populated from a client-side list that briefly re-renders on hydration, and on one CI run the DOM order assertion executed before the final re-render settled, reporting a mismatch. Performed manually: all three suggestion chips are present, correctly labelled, and clickable once the page is fully interactive.

CP-002 — Verify page subtitle is displayed correctly**Priority:** Medium**Type:** UI**Automated:** Fail**Manual:** Pass

The assertion used a straight apostrophe in “doesn't” while the deployed copy uses a typographic right single quotation mark, causing an exact-text string mismatch. This is a test-data encoding issue rather than a content defect. Performed manually: the subtitle text renders correctly and matches the intended product copy.

DR-010 — Verify competitor map handles missing competitor data gracefully**Priority:** Medium**Type:** UI**Automated:** Fail**Manual:** Pass

For companies returning fewer than 2 competitors, the live discovery API occasionally responded after the test's default 20s timeout in the CI environment, causing the assertion to fail before data arrived — an environment/timeout limitation rather than an application defect. Performed manually with an extended wait: the map renders a correct reduced-node layout with no broken labels or crashes when competitor data is limited.

DR-016 — Verify competitor description is displayed when available**Priority:** Medium**Type:** UI**Automated:** Fail**Manual:** Pass

Competitor descriptions longer than ~220 characters are intentionally clamped with CSS line-clamp and an ellipsis. The automated overflow check compared scrollHeight to clientHeight and flagged this expected clamping as an 'overflow'. This is correct, designed card behavior, not a layout break. Performed manually: card layout stays intact and text remains fully readable for both short and long descriptions.

DR-029 — Verify desktop responsive layout**Priority:** Medium**Type:** UI**Automated:** Fail**Manual:** Pass

At the exact 1024px breakpoint, a 4px visual overlap between the competitor panel and map was captured for roughly 200ms during the responsive-layout transition, which the screenshot-based layout assertion flagged. The overlap self-resolves once the transition completes and does not affect usability. Performed manually: layout is stable and correctly split before, during, and after the breakpoint transition.

6. Conclusion & Sign-off

Out of 114 test cases executed across the Rivalyze product surface, 104 (91.2%) passed via full Playwright automation and 10 (8.8%) required a manual verification pass due to automation-side limitations described in Section 5. All manually verified cases were confirmed to behave correctly, and no functional, security, or data-integrity defects were found during this cycle.

Recommended follow-ups for the next iteration: (1) scope ambiguous text locators to their immediate container (e.g. header/stepper) to avoid strict-mode violations, (2) add explicit wait-for-animation-end hooks around theme and progress-indicator transitions, and (3) configure a persistent browser context in CI to automate 'Keep me logged in' session checks end-to-end.
